## CMI 8.2 now released.

The new CATIA Metaphase Interface (CMI) Release 8.2 from T-Systems is now available and enhances the existing CATIA V5 integration in a significant way. With the management of CATProducts in Metaphase, our customers can use the advanced CATIA V5 functionality, e.g. application data and constraints are now supported.

Another highlight of CMI 8.2 is the new CATIA V4 module which supports CATParts and the determination of bounding boxes.
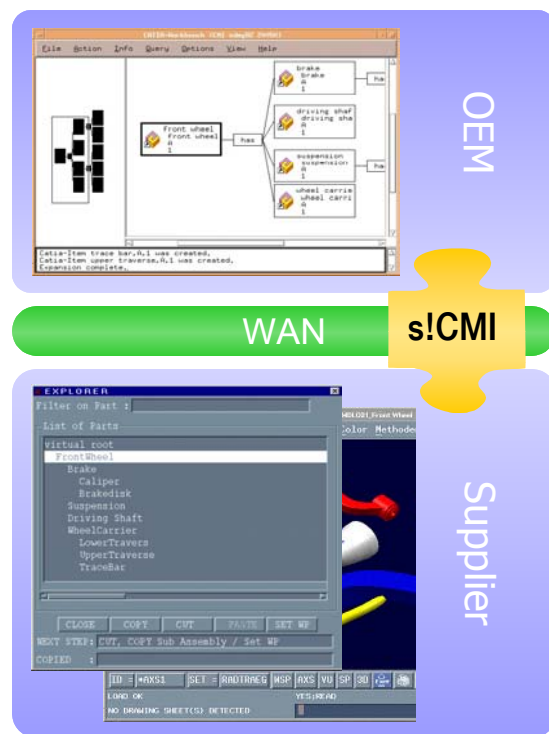

Launch of the CMI forum.

T-Systems has established a forum on its CMI homepage as already anounced on the CMI User Day in Palm Springs, USA.

With the new CMI forum, T-Systems provides a communication platform between the users of CMI and T-Systems to answer upcoming questions and to pick up new ideas or improvement suggestions. By this means customers are directly involved in the CMI development process.

s!CMI integrates your suppliers.

The new released s!CMI 1.0 is a lean integration of off-site CATIA work places into the PLM system TeamCenter/ Metaphase.

Using s!CMI your partner can work in the provided product structure without having any software beside CATIA V4.

The simple and easy to use concept, having no additional hardware and administration costs, makes it an outstanding supplier integration.
